Comprehensive application acceleration, traffic management, and web security.

Citrix® NetScaler® 9.1 is a Web application delivery appliance that makes applications five times better by accelerating performance, ensuring that applications, such as JD Edwards EnterpriseOne 9.0 are always available and protected, and substantially lowering costs.

Company Overview

Citrix Systems, Inc. (NASDAQ:CTXS) is the leading provider of virtualization, networking and software as a service technologies for more than 230,000 organizations worldwide. Its Citrix Delivery Center, Citrix Cloud Center (C3) and Citrix Online Services product families radically simplify computing for millions of users, delivering applications as an on-demand service to any user, in any location on any device. Citrix customers include the world's largest Internet companies, 99 percent of Fortune Global 500 enterprises, and hundreds of thousands of small businesses and prosumers worldwide. Citrix partners with over 10,000 companies worldwide in more than 100 countries. Founded in 1989, annual revenue in 2008 was \$1.6 billion.

Solution Overview

Citrix® NetScaler® 9.1 is an integrated Web application delivery controller appliance that functions as an application accelerator through caching and HTTP compression, provides advanced traffic management through Layer 4-7 load balancing and content switching, and includes application security via a Web application firewall and SSL VPN. NetScaler further off loads application and Web servers to ensure application availability, increased security through SSL, and server consolidation.

Citrix NetScaler benefits include:

- Reduce TCO with an all-in-one appliance that takes the load off of overburdened networks
- Optimize the user experience by accelerating JD Edwards EnterpriseOne 9.0 application performance over the web by 5X or more
- Secure Web apps by utilizing an advanced Web application firewall to block application attacks and protect sensitive information from unauthorized access

Availability

For more information on Citrix NetScaler and other Citrix application delivery solutions, please visit the Citrix Web site at www.citrix.com or contact a Citrix representative at +1.800.437.7503.

Support

Citrix has a global support organization delivering customer support. Please visit our Web site at www.citrix.com/support or call +1.800.4.CITRIX.

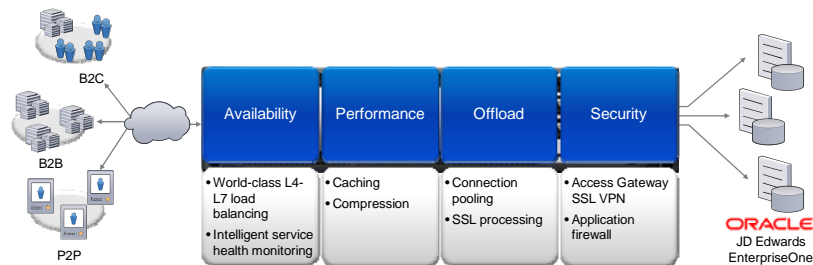

Solution Details

NetScaler's parallel processing nCore™ technology leverages multi-core processors to provide unprecedented performance and scalability for even the most challenging web applications, including JD Edwards EnterpriseOne 9.0. NetScaler appliances are available in three editions running on a wide ranging array of hardware platforms for any throughput need-from 500 Mbps through 18 Gbps.

Deployed in front of web servers, NetScaler application delivery controller models combine high-speed load balancing and content switching with application acceleration, content caching, SSL acceleration, network optimization and application performance monitoring in a single built-for-purpose hardware platform.

Unlike other approaches that require multiple point products, NetScaler is an all-in-one appliance that is easy to deploy, configure, and operate with AppExpert Visual Policy Builder GUI-based tools, AppExpert Templates, and multiple wizards.

All the extensive application delivery functionality of NetScaler can now be obtained in a virtual appliance. Organizations of any size can deploy NetScaler VPX on industry standard servers anywhere in the data center. NetScaler VPX enables load balancing, application acceleration, application security and server offload to become virtual appliance-based services that can be easily and dynamically deployed; on-demand and anywhere in the datacenter. Whether installed on a single server or across all cloud computing datacenters.

Successful Web Application Delivery with Citrix NetScaler
