Deliver Oracle applications as a service

Citrix XenApp™ 5.0 is an end-to-end Application Delivery Solution that delivers all Windows applications to all users and locations.

Company Overview

Citrix Systems, Inc. (NASDAQ:CTXS) is the leading provider of virtualization, networking and software as a service technologies for more than 230,000 organizations worldwide. Its Citrix Delivery Center, Citrix Cloud Center (C3) and Citrix Online Services product families radically simplify computing for millions of users, delivering applications as an on-demand service to any user, in any location on any device. Citrix customers include the world's largest Internet companies, 99 percent of Fortune Global 500 enterprises, and hundreds of thousands of small businesses and prosumers worldwide. Citrix partners with over 10,000 companies worldwide in more than 100 countries. Founded in 1989, annual revenue in 2008 was \$1.6 billion.

Solution Overview

Citrix XenApp™ 5.0 is a Windows® application delivery system that manages applications in the datacenter and delivers them as an on-demand service to users anywhere using any device. XenApp reduces the cost of application management by up to 50 percent, delivers any application instantly to users anywhere and improves application and data security.

XenApp enables IT to centrally manage a single instance of each application and deliver it to users for online and offline use, providing a better than installed experience. In use by over 100 million users worldwide, XenApp delivers on the promise of proven application compatibility.

Citrix XenApp benefits include:

- Reduced cost of application management by centralizing applications.
- Delivery of JD Edwards EnterpriseOne 9.0 instantly to users anywhere.
- Improved security with centralized control and secure access to data and applications

Availability

For more information on Citrix XenApp and other Citrix application delivery solutions, please visit the Citrix Web site at www.citrix.com or contact a Citrix representative at +1.800.437.7503.

Support

Citrix has a global support organization delivering customer support. Please visit our Web site at www.citrix.com/support or call +1.800.4.CITRIX.

Solution Details

XenApp provides on-demand delivery of applications, like JD Edwards EnterpriseOne 9.0, without leaving the data center by using the state-of-the-art application virtualization technologies. The solution eliminates the need to install or manage applications on individual user devices, making application testing, provisioning, management and support easier and less costly. Underlying intelligence automatically selects the best delivery method for the user, the application and the location.

Citrix XenApp is unique in that it is a complete system for application delivery, offering both online and offline application access through a combination of application hosting and application streaming directly to user devices. When users request an application, XenApp determines if their device is compatible and capable of running the application in question. The minimum requirements of a target device are a compatible Windows operating system and appropriate Citrix client software. If the user device meets minimum requirements, then XenApp initiates local application delivery via application streaming directly into an isolated environment on the users device. In the event that the user device is not capable of running a particular application, XenApp initiates hosted application delivery.

With XenApp, JD Edwards EnterpriseOne 9.0 application responsiveness is improved and user productivity increased with patented application virtualization techniques perfected over 15 years. XenApp greatly reduces network bandwidth requirements and mitigates latency issues, because with applications hosted on the server, only mouse movements, keystrokes and screen updates traverse the network. Even data-laden and graphics-heavy applications perform better, which increases user productivity and adoption of applications.
