

Using machine learning to make work 'suck a little less'

A new Citrix-AWS partnership could simplify application delivery.
Analysts describe the news as sensible for the two companies.

The new Citrix-AWS partnership, announced during AWS re:Invent 2019 in Las Vegas, is intended to enable greater user choice in hybrid cloud environments. Notably, Citrix ADC, the company's application delivery and load-balancing solution, now works with in AWS Outposts, which brings Amazon's cloud hardware on premises.
