

NetScaler Management and Analytics Service

NetScaler Management and Analytics Service (MA Service) provides centralized network management, analytics, and automation as a service from the cloud to support applications deployed across public clouds and on-premise datacenters, whether they are virtualized or containerized. From a single platform, administrators can view, automate, and manage network services across their entire infrastructure. NetScaler MA Service enables IT operations and dev ops teams to focus on managing end-to-end application delivery, while letting Citrix take care of the operation, updates, and monitoring of the service.

Key benefits

- Support for multi-cloud and hybrid environments including on premises, in AWS[®] and Azure[®]
- Centralized management for all NetScaler appliances and instances
- Application-centric view of network services infrastructure
- Logging and analytics to provide actionable insights
- Automated provisioning of NetScaler services
- SSL certificate management to minimize access disruptions
- Configuration templates to simplify application deployment
- Comprehensive role-based access to different groups and users
- Guided workflow for on-boarding NetScaler instances
- App analytics dashboards for application health, performance, and security
- Evergreen updates
- Self-service 30-day free trial
- Ability to harness and act on network data to manage application performance and security
- End-to-end visibility of Citrix XenApp and XenDesktop HDX traffic

Enabling data-center transformation

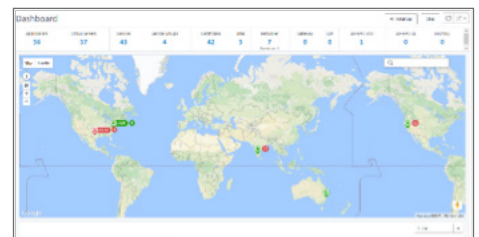

As your infrastructure evolves towards a software-defined model and your apps move to the cloud, automation of app-delivery services becomes increasingly important. NetScaler MA Service provides consistent visibility, automation and control as you move your apps to the cloud.

- Per-transaction visibility, reporting, and rollups to easily identify errors and provide visibility into transaction and application performance
- Key insights into Citrix XenApp and XenDesktop HDX and remote VPN sessions

Subscription service from the cloud

Citrix offers MA Service as a subscription service from the cloud. Sign-up is easy and takes only a few minutes. New features are delivered regularly on the service so you never have to worry about keeping up to date. With no infrastructure to manage, MA Service simplifies application delivery. You can try it with a free 30-day trial by going [here](#).

Simplified network administration

NetScaler MA Service delivers visual dashboards that provide a high-level overview of all deployed NetScaler instances. Events can be proactively monitored to get ahead of potential application disruptions and issues.

Delivering data-driven analytics

NetScaler MA Service serves as a critical tool for managing the performance of applications delivered by the NetScaler application delivery portfolio. Application-specific insights are provided to the administrator for ensuring performance and reliability.

- Centralized management and configuration across all instances from a single dashboard
- Scheduling for software upgrades across all NetScaler instances
- SSL certificate management for renewals and policy enforcement
- Configuration jobs and templates to simplify repetitive administrative tasks
- Management of third-party load-balancing software

- Log aggregation at scale from on-premises deployments or public clouds (thousands of instances)
- Comprehensive set of insights on customer usage and behavior

Application-centric lifecycle management

- Simplification of application deployments with NetScaler for developers where configuration details are abstracted
- Role-based access for developers to NetScaler configurations to empower developers and reduce the burden on infrastructure operations to manage these requests
- Application-oriented templates that enable developers to easily implement functionalities in NetScaler
- Role-based partitioned access to application developers and owners
- Declarative application configurations and templates built in the GUI as NetScaler StyleBooks

Platform and location independence

NetScaler MA Service provides management for all NetScaler software or appliances, deployed in any form factor, on premises or in the cloud. Deployments are abstracted as instances that can span across physical appliances or commodity servers, and are highly scalable.

- Centralized management for NetScaler MPX, SDX, VPX, CPX, and SD-WAN WAN Opt
- Support for deployments across on-premises or on AWS® or Azure®

Licensing and features

NetScaler MA Service is deployed as a subscription service in the cloud. NetScaler MA Service is licensed as follows:

- Subscription is on an annual basis (single year and multiyear).
- Licenses are packaged in vServer packs of 10 VIPs and include analytics, monitoring, and historical data retention.
- Data retention is available as an add-on for longer-term historical analytics and reporting.

Analytics

- HDX Insight
- Gateway Insight
- Security Insight

Application management

- Application management dashboard
- Application performance dashboard
- Application security dashboard

StyleBooks

- YAML configuration templates

Network reporting

- Instance-level reporting
- vServer-level reporting

Network functions

- Visibility and management per vServer/service/servers

Inventory management

- Infrastructure dashboard (no SSO to instances)
- Instance groups
- Instance dashboard
- Grouping by sites
- Event management
- Syslog aggregation

SSL certificate management

- SSL enterprise policy
- Monitoring expiry of certificates
- Install/CSR/Link/Unlink certificates (no download of certs and keys)
- NetScaler SSL certificate charts
- SSL virtual server charts

Configuration management

- Configuration jobs (no record & play)
- Configuration audit
- Configuration advice
- Role-based access control
- Instance-level RBAC
- vServer/app-level RBAC
