

Updating macOS EPA Plug-in v26.02.13 in Citrix ADC

The following files need to be updated:

- /var/netScaler/gui/epa/scripts/mac/Citrix_Endpoint_Analysis.dmg
- /var/netScaler/gui/vpn/pluginlist.xml

1. Citrix_Endpoint_Analysis.dmg

This is the installer file for the EPA app.

Place the new Citrix_Endpoint_Analysis.dmg under:

```
/var/netScaler/gui/epa/scripts/mac/
```

2. pluginlist.xml

This XML file exists only in NetScaler Gateway version 11.0 and later.

Modify the version and compatibleFrom attributes as mentioned below.

Sample <plugin> node with type "MAC-EPA" in pluginlist.xml

Before Update:

```
<plugin
  name=""
  type="MAC-EPA"
  version="x.x.x.x"
  path="/epa/scripts/mac/Citrix_Endpoint_Analysis.dmg"
  compatibleFrom="y.y.y.y"
  compatibleTill=""
/>
```

After Update (to version 26.02.13):

```
<plugin
  name=""
  type="MAC-EPA"
  version="26.02.13"
  path="/epa/scripts/mac/Citrix_Endpoint_Analysis.dmg"
  compatibleFrom="26.02.13"
  compatibleTill=""
/>
```

Update the compatibleFrom attribute only if instructed with a proper value.

Final Steps

Run the following two commands:

```
rm -rf /netscaler/ns_gui
ln -s /var/netscaler/gui /netscaler/ns_gui
```
