

Citrix Secure Hub

Welcome to the simple, more secure way to work on your mobile device

Your IT team understands that to be productive you need to be able to work easily and securely from your mobile device — while keeping your personal information private. **Citrix Secure Hub makes this possible.** Sign in once and gain access to all your corporate apps, files, and even desktops from any of your mobile devices.

Here are the top 4 reasons to start using it today:

- 1. Access to everything** – Secure Hub is your one-stop shop for secure access to your corporate, cloud, and productivity apps from your mobile device. Check email, send files, and access corporate resources while on the go.
- 2. Better security** – It's oftentimes easier for hackers to steal sensitive information from unsecured mobile devices than corporate data centers. With Secure Hub, IT is able to keep company information separate from your personal information and can keep it more secure because it's not stored on your actual device.
- 3. Limitless productivity** – Secure Hub offers many convenient productivity apps, including Secure Mail, which looks and feels like your native mail app but provides the advanced security features that protect your company's data. Plus, you get many convenient features built for business, like encryption, one-touch access to join a meeting, out-of-office notifications, secure file sharing, and more.
- 4. Privacy guarantee** – Whether your company manages your device or only your business apps, you can rest assured that your personal information remains private. IT cannot infringe on your privacy by accessing things like your screen, browsing history, text messages, photos, and videos.

What can IT see?

- Make/model/OS version
- Device phone number
- Your Citrix managed apps
- Location
- Battery level
- Storage capacity
- Corporate data

- Personal email
- Browsing history
- Text messages
- Photos/videos/albums/
camera roll
- Voicemails
- Personal application data

Watch these short videos to see how easy it is to get started with Secure Hub once you have installed Workspace App on your device:
