Desktop as a Service (DaaS) is already used by 4 out of 10 organizations, leading the market with over 400,000 customers and 100 million desktop delivery, making it a top choice for businesses. With DaaS, IT can securely provision project-specific apps, application toolsets, and Microsoft 365 services to independent contract talent.

Business and IT professionals for the duration of their contract. With DaaS, companies can avoid the capital expenditure associated with purchasing and maintaining hardware and software, allowing them to focus on mission-critical apps during any kind of experimentation.

DaaS allows companies to transform their remote work experience without using VPNs, providing a great user experience. Employees can work from anywhere, on any device, including Windows, Mac, iOS, Android, or Chromebook, staying safe, productive, and engaged so your business can work from any HTML-5 browser or secure application toolset.

DaaS offers an all-inclusive approach to delivering Windows-based applications and desktops from the cloud. It's an all-in-one way to deliver Windows-based applications and desktops, including productivity tools from Microsoft. With DaaS, your business can transform your remote work experience and increase compliance.

Simplify business operations and processes…To meet these demands, businesses need Desktop as a Service (DaaS). DaaS is ideal for modern, data-demanding engineering services, data-intensive research and development, high-value finance, and investments, and companies that need the flexibility of desktop delivery.
