VDI has been great, but... 

Virtual desktop infrastructure (VDI) revolutionized the way organizations worldwide deliver desktop capabilities. Today, however, many of those same organizations are moving to a hybrid or cloud services model of DaaS delivery. That doesn't mean they are leaving behind their on-premises investment. But for the future, they are looking to the cloud. Why? To improve resiliency, simplify management, and improve agility.

The challenge of on-premises deployments

- **Hardware, space, and infrastructure are all required.**

- **Optimization for Microsoft Teams**

DaaS vs. on-premises VDI: What are the advantages?

If you're a Citrix Virtual Apps and Desktops customer, you may be thinking of moving to a hybrid or cloud services model. So here's the question: Would a desktop as a service (DaaS) deployment provide any real advantages compared to the on-premises deployment you already have in place? Let's take a look.

Top 5 benefits of desktop as a service

1. **Simplified business continuity and disaster recovery**
   - By leveraging cloud services, you can ensure that your applications and data are secure, even in the event of a disaster.
   - **Continuous, hands-on management leaves less time for other business initiatives.**
   - **IT Teams need a thorough understanding of how Citrix technologies work to create the best environment for their users.**
   - **Performing manual updates can be time consuming and cumbersome.**

2. **Fast, easy access to new features and functionality**
   - **IT executives surveyed are moving some or all of their systems to the cloud.**
   - **99%**
   - **Source: DaaS Pulse Survey**

3. **Faster time to value and broader cloud service integration**
   - **Your agile and advanced disaster recovery framework can now be tailored to your cloud needs.**
   - **Citrix Virtual Apps and Desktops service can be seamlessly integrated with your cloud environment, providing a fully managed and secure desktop experience.**
   - **Hybrid cloud Flexibility**
   - **Citrix Workspace experience**
   - **Enhanced Workspace Environment Management capabilities**

4. **Efficient management of cloud IaaS costs and consumption**
   - **Leveraging the power of Citrix Virtual Apps and Desktops service on the public cloud of your choice, your environment is already built for redundancy in the case of an unexpected event.**
   - **Cloud deployments are easily scalable. Whether you are undergoing a merger, acquisition, hiring a seasonal workforce, or bringing on a new team full time, you can get those users up and running in no time.**
   - **Enhanced Workspace Environment Management capabilities**
   - **Service continuity**

5. **Keep costs in check with Autoscale and streamlined processes**

With Citrix, the choice is yours.
