

Why Your Hybrid Cloud Needs High Performance Application Delivery

Get the Citrix NetScaler ADC and AWS Advantage

Migration, expansion, and growth ...

Digital workspaces have expanded beyond the corporate firewall creating complexity for IT:

Basic load balancing alone no longer ensures applications will work without disruption.

Offloading of server tasks, web optimization, and global server load balancing from an ADC ensure applications are available across multiple sites and clouds to users anywhere, around the clock.

...fuel your organization's need for greater security, consistency, and visibility.

Maintaining consistent policies, views, troubleshooting, and SSL enforcement mechanisms across on-premise and on cloud environments like Amazon Web Services (AWS) is imperative:

Centralized dashboards give comprehensive visibility into user issues, SSL certificates, and security threats in order to simplify control.

Powerful analytics provide actionable insights.

In addition, you need automation for greater scalability, optimization, and control.

With automation, IT can optimize application availability across diverse application hosting environments.

Citrix NetScaler ADC in AWS Marketplace is redefining application delivery control:

Automatically scale networking resources up or down based on AWS server demand and automate routine network management tasks with an API.

Empower IT Operations teams to provide LOB application developers with the speed and visibility they need for developing and troubleshooting their applications.

It's time to take application performance and delivery to the next level.

Citrix NetScaler ADC in AWS Marketplace gives you high application uptime and performance with enterprise security and scalability to easily adapt to evolving cloud environments.

Your applications need the benefit of a trusted application delivery solution.

NetScaler ADC in AWS Marketplace provides secure access and delivery of applications in a hybrid and multi-cloud landscape, at low TCO with investment protection through pooling of licenses.

Transform your infrastructure to a software-defined network, and experience greater app visibility, agility, control, and performance with Citrix NetScaler ADC on AWS.
