

Experience enterprise mobility with secure file sharing

HPE 3PAR StoreServ Storage with Citrix ShareFile Enterprise

An enterprise level on-premise or hybrid cloud solution that lets you store, share, and collaborate to increase productivity while maintaining control over enterprise information.

Efficient on-premise storage for hybrid or private cloud solution

Security

Easily encrypt files and control access with AES 256-bit file encryption and granular access permissions

Mobility

Enable secure remote access and bring your own device (BYOD) for greater workforce productivity

Efficiency

- Truly converged block, file, and object access for single shared capacity pool and unified management provided by 3PAR StoreServ with File Persona
- 2x easier to provision and 2x easier to monitor in 1/3 the data center space¹

Mobility or security?

Your workforce demands a collaboration system that gives them anytime, anywhere access to the files and tools they need to be their most productive. And let's face it: if you don't provide it—or it isn't easy to use—your employees will work around it, using third-party devices, websites, and tools to store core digital assets, like legal agreement drafts, business presentations, and documents, that create a serious security risk for your intellectual property.

Keeping your information assets protected is an IT imperative. But so is giving your workforce the mobility they need to share and collaborate to fuel your business growth. With ShareFile, you can mobilize and secure your existing data.

So, how do you balance information access with IT control? By supporting bring-your-own-device (BYOD) demands of today's mobile workforce with a solution that unleashes their productivity—not your data. HPE and Citrix® have the answer.

Securely sync, share, and store large files

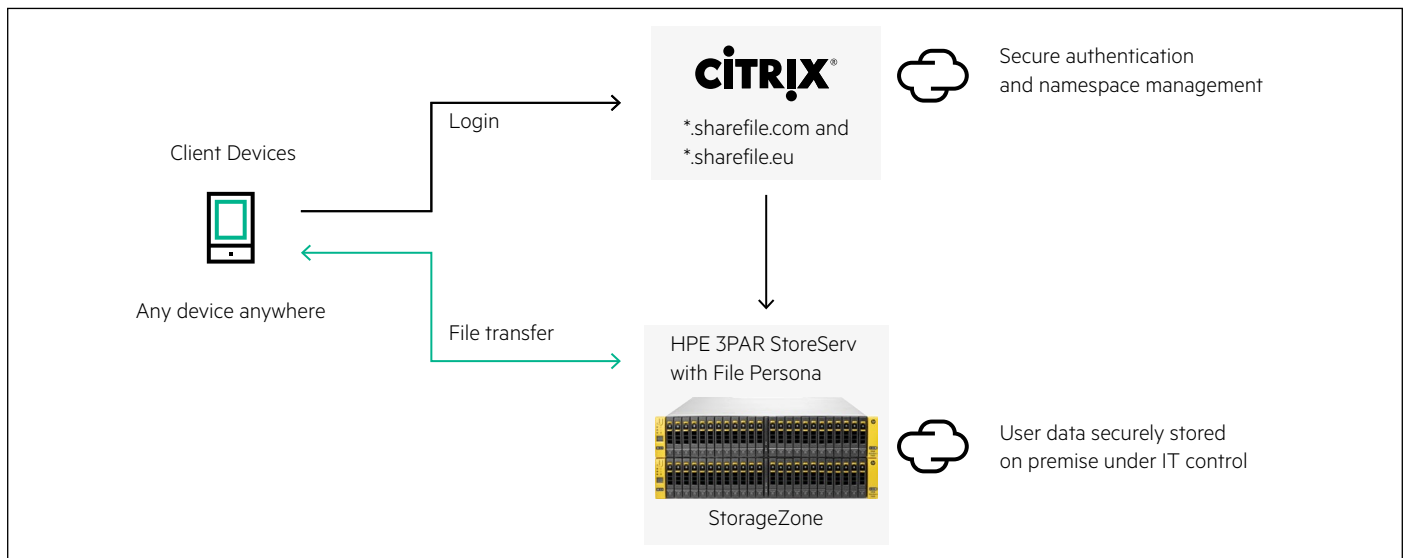

Citrix ShareFile Enterprise powered by HPE 3PAR StoreServ with File Persona allows companies to upload and share large business files securely and easily, enabling enterprise collaboration to be integrated within most business workflows. Files of up to 100 GB may be securely uploaded using AES encryption. Users can access and share large files with any device, from anywhere, while you maintain the proper administrative controls over your information.

Enable secure BYOD with Citrix ShareFile

Citrix ShareFile enables mobility with BYOD accessibility by giving users seamless, secure access to synced files and folders on their PC or on the go. With support for popular mobile devices—and easy-to-use interfaces with dynamic access options—users can leverage the devices they are most comfortable with, and avoid the learning curve of new tools and devices. Citrix helps you ensure the privacy of your confidential information with AES 256-bit file encryption and granular access permissions.

Solution brief

Together, HPE and Citrix offer a viable solution for customers who require remote cloud access and data sharing, while maintaining control of user data with on-premise storage. Customer-managed on-premise StorageZones provide you with complete data sovereignty and fulfill your compliance requirements. Customer-managed StorageZones boost performance by giving you the ability to store data in close proximity to the user. Since storage is a key element of customer-managed StorageZones, Citrix has partnered with HPE to validate the compatibility of this solution with HPE 3PAR StoreServ and File Persona, simplifying and accelerating deployments of StorageZones for our joint customers.

HPE 3PAR StoreServ Storage with HPE File Persona

HPE 3PAR StoreServ with File Persona is highly efficient, flash optimized storage engineered for the true convergence of block, file, and object access. HPE 3PAR Operating System and converged controllers incorporate multi-protocol support into the heart of the system's architecture. This unique solution delivers tightly integrated, truly converged storage for provisioning both block volumes for server workloads and file and object shares for client workloads, such as home directory consolidation, group and corporate shares—efficiently, effortlessly, and without compromise.

Efficient: Improve your primary storage efficiency

- 2x easier to provision and 2x easier to monitor
- One-third of the data center footprint with power savings
- One converged capacity eliminates wasted block or file space reservation

Effortless: Simplify your storage deployment and administration

- Autonomic provisioning of all capacity
- Single, simple, and streamlined administration of block, file, and object access

Bulletproof: Deploy your file shares with confidence

- Resilient Mesh-Active architecture
- Mission-critical proven HPE file system
