NetApp®

CITRIX®

Solution Brief

NetApp Storage Solution for Citrix ShareFile Enterprise

An agile data infrastructure for Citrix ShareFile Enterprise

KEY BENEFITS

- Share, store, sync, and secure data on any device, anywhere.
- Maintain 100% accessibility to data with nondisruptive storage operation.
- Use fewer disk drives, less power, and less data center space with NetApp® storage efficiency features.
- Start small and grow storage performance or capacity without limits.
- Store all of your data for Citrix® ShareFile™, XenDesktop®, and XenApp® on a unified architecture.

The Challenge
Providing secure file sharing and mobile data access

Many IT organizations today seek a secure alternative to consumer-style file-sharing services that will give them full control over enterprise data. At the same time, mobile workers need access to their data from any device, anywhere and at any time, to remain productive.

Citrix ShareFile is an enterprise follow-me data solution that enables IT to deliver a secure and robust service that meets the mobility and collaboration needs of all users. The StorageZones feature allows IT to store data both on and off premises. With customer-managed StorageZones, IT can store data within its data center to maintain complete control of enterprise content.

The on-premises storage system is a central component of customer-managed StorageZones. IT might be required to provide data access with no downtime to nondisruptively scale per-formance and capacity as usage grows and to manage costs tightly through efficient operation.

The NetApp Solution

Deliver anytime access to data through nondisruptive operations with Data ONTAP® software. You can be confident that your enterprise data is protected with backup and recovery based on Snapshot™ technology.

With NetApp you can start small and scale storage performance or capacity to meet rapid growth. Consolidate your data for Citrix ShareFile, XenDesktop, and XenApp onto a unified architecture with secure multi-tenancy.

NetApp storage efficiency features can help you further reduce costs by using fewer disk drives, less power, and less data center space.

Store, sync, share data on any device, anywhere

ShareFile makes it possible for users to access and sync all of their data from any device and securely share it with people both inside and outside the organization for easy collaboration and enhanced productivity. Support for large file sizes (up to 100GB) and integration with workflow tools such as Microsoft® Outlook® provide an

unmatched user experience. ShareFile also allows IT to deliver a managed service with powerful security, reporting, and auditing features designed for enterprises.

Deliver anytime access

Maintain 100% accessibility to data with the nondisruptive operation of an agile data infrastructure. Data ONTAP enables transparent movement of data between storage controllers to balance performance or capacity. You can add new storage, perform maintenance, or retire storage while sustaining continuous data access.

Protect your data

Our backup and recovery based on Snapshot let you create and manage file system copies with no performance impact and minimal consumption of storage space. Then restore individual files as needed, going back weeks or months in time.

Reduce costs with IT efficiency

NetApp storage efficiency technologies—deduplication, compression, Snapshot, and more—enable you to store the maximum amount of data in the smallest possible space and at the lowest possible cost.

Start small and grow smart

You can start with an affordable solution and protect your investment as your storage needs change. Our truly unified storage lets you expand capacity and add functionality quickly and easily. Seamlessly upgrade to other NetApp systems while using the same storage operating system and software tools.

Consolidate Citrix data

Citrix makes it possible to deliver desktops, applications, and data on any device. NetApp gives you the ability to store all of your data for ShareFile, XenDesktop, and XenApp on a unified architecture. We support NAS protocols with ShareFile and offer a choice of SAN and NAS protocols for XenDesktop and XenApp across multiple hypervisors.

And you don't need to trade off security for the efficiency of storage consolidation because NetApp secure multi-tenancy lets you create virtual partitions so that data from different groups is isolated and workload performance is maintained.

About NetApp

NetApp creates innovative storage and data management solutions that deliver outstanding cost efficiency and accelerate business breakthroughs. Discover our passion for helping companies around the world go further, faster at *www.netapp.com*.
