

Cisco HyperFlex VDI for Citrix: Where Virtual Becomes Reality

The market for Virtual Desktop Infrastructure (VDI) solutions is exploding, largely due to a couple of major, related challenges faced by enterprises worldwide – tackling the tough demands of workforce mobility and establishing a viable bring-your-own-device (BYOD) management policy. In a general sense, enterprises want to eliminate hindrances, such as time zone barriers and changes in work locations. They also want to ensure access to official and confidential data through the personal devices of their employees.

55%

of IT professionals cite mobility as a top VDI driver¹

Cisco and Citrix have come together to create a solution that meets those needs. The power and know-how of these two industry innovators ensures a VDI solution with an all-important, superior user experience.

How does Cisco HyperFlex VDI for Citrix stack up?

VDI eliminates the need to manage up to thousands of individual systems and allows centralized management of resources. Other benefits include increased flexibility, simplified backup operations, greater security control and compliance, faster problem resolution, rapid deployment, and application on demand to any device.²

Standing in the Marketplace

Citrix Virtual Apps and Desktops lead the industry in desktop and app virtualization¹

1st and Only

hyperconverged system to integrate **Networking**, along with compute and storage, into a single solution

User Experience

of IT professionals report improved productivity³

Deploys in less than **1 hour**

Cost Containment

Citrix Virtual Apps reduce management costs by as much as **90%**

Cisco HyperFlex™ reduces storage costs by **80%**

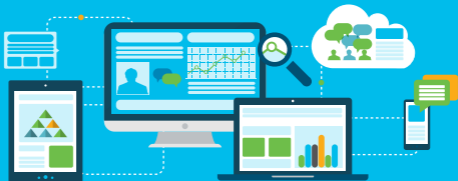

The VDI imperative for Windows 10 migration

As Windows 8 approaches its end of life, migrating to Windows 10 becomes imperative. For enterprises with scores, hundreds, or thousands of employees, migration becomes an IT desktop-by-desktop, device-by-device nightmare. With VDI, however, migrating to Windows 10 is a “one and done” operation, saving countless hours of work and disruption. That’s because Windows 10 can be quickly and easily pushed out, like magic, to every desktop and device in one simple move.

Windows 10 with Office 2016 tested on Citrix Virtual Desktops delivered subsecond response

Making virtual a reality

Cisco HyperFlex VDI for Citrix provides an ideal virtual desktop solution. It is flexible, scalable, reliable, efficient, robust, secure, mobile, simple, turnkey, trusted, tested, and validated. It provides a superior, industry-leading user experience and is the solution that makes virtual an affordable reality.
