

Improve Productivity with Secure, Intelligent Digital Workspaces

Challenges in delivering secure desktops, apps, and data

The proliferation of devices and the emergence of the cloud has led to an increasingly mobile and distributed workplace. As a result, businesses need to provide predictable application and desktop access to users around the world, without relinquishing network control or hindering security, regardless of where the application itself is running.

Adding to this challenge is the expansion of enterprise applications, which requires digital workspaces to support a wide variety of application types. This variety combined with the complexity and richness of modern applications can make it hard to deliver quality and seamless experiences on geographically dispersed personal devices.

Citrix digital workspace solution

Citrix delivers people-centric solutions for a better way to work, including unified workspace, networking, and analytics technology that help organizations innovate, engage customers, and support a more productive workforce, without sacrificing security. Citrix Workspace is a digital workspaces solution that improves business productivity. IT benefits from increased visibility and simplified management through access control and endpoint management capabilities. These also enable a secure, unified, contextual experience for SaaS, mobile, and virtual apps, meaning employees gain a secure platform for productivity on their personal device.

Citrix Workspace is supported by Citrix Networking and Analytics solutions, which simplify how IT can control the cloud and on-premises delivery of applications and content for virtually any location, device, or network. By running Citrix Workspace on Amazon Web Services (AWS), you gain a global footprint to more easily and seamlessly support users around the world.

NEW SOLUTIONS

Virtual Apps, Desktop & Content:

Deliver secure access to virtual Windows, Linux, mobile, and web applications and desktops. Citrix Workspace provides secure, synchronized access to user data from virtually anywhere and any device.

Cloud-powered resources:

Accelerate business agility and reduce project risk. Deploying Citrix Cloud Resource Locations on AWS delivers high availability, massive scalability, and global performance.

Security & delivery analytics:

Actionable insights generated by artificial intelligence and machine learning allow you to react to issues in real time based on changes in user behavior, device trust, and network conditions.

SaaS protection:

For non-virtualized SaaS applications, Citrix Workspace protects end-points and sensitive data with token-based, single sign-on and visibility into Single Sockets Layer (SSL) traffic – regardless of destination.

Key benefits

Fast

Rapidly deploy Citrix Cloud services to support your Citrix Workspace deployments and continuously leverage the latest capabilities and innovations.

Simple

Get better control with less effort. Enable unified, reliable application and data access, while centralizing management and gaining deep, continuous business insights.

Secure

Citrix provides a broad set of capabilities that allow IT to define and monitor policies that control where data resides, who can access it, and what they can do with it, depending on the time and their location.

Adaptable

Solutions for virtually any application, device, and location. Manage deployments across AWS and hybrid cloud environments with full stack workspaces technology delivered as a service.

Citrix on AWS

By deploying Citrix Workspace on AWS, you can meet the demands of an increasingly mobile workplace and deliver intelligent and unified apps and desktops with a secure and consistent user experience. With Citrix, users get a seamless work experience and IT has a unified platform to secure, manage, and monitor diverse technologies in complex cloud environments. Citrix solutions are in use by more than 400,000 organizations including 99 percent of the Fortune 100 and 98 percent of the Fortune 500.

AWS complements Citrix Workspace offerings by providing a global footprint, making it easier to deliver applications and desktops to users around the world. Furthermore, AWS allows you to pair Citrix resources with varying Amazon Elastic Compute Cloud (Amazon EC2) instances, optimized to meet your workload's specific performance needs. You can easily scale up or down resources to reduce costs and meet elastic user demand.

Experiment for yourself with the [AWS Accelerator for Citrix](#) -- a 25-user trial over a 60-day period.

Includes: AWS Quick Start • Access to Experts • Project Toolkit • Cloud Credits

What makes up a Citrix Workspace on AWS?

Apps

Secure SaaS • Virtual Client-Server • Mobile

Content

On-premises • AWS

Devices

PC • Mobile • Thin Client • IoT

Analytics: User • Content • App • Network

Secure Digital Perimeter

Full control of Layer 3 – 7, with AI analytics, policy enforcement and performance optimization
