## Transform your workplace for mobility, productivity, and user experience

---

HPE Hyper Converged 380 with Citrix XenDesktop: The all-in-one solution for digital transformation.

Deliver a high-definition user experience on any device, anywhere. Deploy on a next-generation converged platform that is easy to configure, scale, and manage.

---

### Workforce mobility

Employees in rows of cubicles. Tightly controlled desktop computers. Locked-down networks.

For many companies, those days are gone. To be flexible, productive, and collaborative, users now demand access to their mission-critical applications and data wherever they are: at home, on the road, or at the beach. And employees aren't always using company-provided, company-managed devices, they are on their own phones, tablets, laptops, and other devices.

The challenge for IT is to provide the mobility and productivity demanded by users without sacrificing reliability, performance, and security. And without blowing the budget.

### Digital transformation

Digital business transformation addresses this challenge. When the old approach no longer meets the needs of the business, it's time to find a new way. Businesses transform by using new products and services to align technology and business and to enable innovative models.

HPE and Citrix have teamed to create a new model for mobile workforces, the HPE Hyper Converged 380 with Citrix XenDesktop. This integrated and pretested solution combines

industry-leading virtualization software from Citrix with HPE's converged hardware platform. This solution establishes a new way to deliver applications to mobile devices. It is flexible, secure, and efficient to operate.

### Integrated solution

Citrix XenDesktop provides the foundation for secure access to applications and data from any device and any network. You can choose the delivery model, providing access to a variety of applications with XenApp, or full desktops with XenDesktop. The user's digital experience is seamless, with the same high-definition interface on a variety of devices. XenDesktop provides a complete

ActualTech Media, "Hyperconverged Infrastructure in the Modern Enterprise," December 2015

---

virtual application and desktop solution for mobile environments from a centrally-managed platform. The data remains in the data center, where it is secured and managed easily and at lower cost. With centralized management of applications and data, there is no compromise on regulatory compliance or access control.

HPE Hyper Converged 380 is expandable from 2-16 nodes in a single cluster, 12-16 cores/node, 128GB–1.5TB memory per node, and 3-24 TB storage per node.

HPE Hyper Converged 380 uses an appliance approach that combines processing power, memory, storage, and networking in one server. Each of these components can be scaled independently, providing greater flexibility in right-sizing the system for the workload. It is easy to set up, provision, manage, and upgrade.

As an integrated and validated solution, HPE Hyper Converged 380 with Citrix XenDesktop is greater than the sum of its parts. It allows organizations of all types to deliver secure virtual apps and desktops across the spectrum of users, from task/office workers to power users. Employees gain the freedom to work productively from anywhere.

The solution can be up and running in minutes to hours, not in days. It is managed remotely and easily with intuitive management software running on the system, so there's no need for external management software.

When demand increases, additional hardware can be deployed without changing the Citrix XenDesktop configuration, making it possible to expand capacity without adding complexity.

## Conclusion

Your users demand a consistent, high-quality experience when they access applications and data in a mobile environment. The challenge to IT is to meet these demands without compromising on security. This calls for transformation from a locked-down approach to a flexible delivery model.

The HPE Hyper Converged 380 with Citrix XenDesktop solution is flexible, secure, and consistent. It gives mobile users the access they need while simplifying operations and reducing costs.
