Citrix Systems streamlines business for Porter Davis, ARN

Individuals will access corporate applications, data, and services from an average of six different computing devices a day

Auto-hybrid solutions ready for your remote workforce

Corporate apps with coffee

Commute across the living room

Traffic is a mess this morning in downtown Boston, so Chloe pops into her neighborhood coffee shop for a latte. She pulls out her tablet and connects to a Wi-Fi hot spot to access her virtual Windows 10 desktop and all its apps. Using information from her earlier call with Hong Kong, she puts the finishing touches on a presentation she’ll be giving this afternoon when she flies to New York City to meet with a client.

Virtual-desktop access with altitude

Chloe lands in New York City and is on her way to the client when she realizes she left her laptop on the plane! No need to panic because all of her sensitive client information — and her presentation — reside securely in the data center and not on her computer. A loaner laptop from the client is all it takes to begin her presentation.

Lost ... but found

Chloe has to stop by the office before her flight to go over her presentation with her boss. When she launches her virtual desktop on the laptop, she sees the same PowerPoint presentation she was working on at the café, open and waiting. It and the rest of her desktop are exactly as she last saw them on her tablet.

Seamless follow-me app experience

Chloe's presentation is a resounding success, but the client has a few questions about its current investments. Instantly, Chloe securely accesses the client’s confidential account details from her virtual app and answers the questions without waiting to get back to the office.

Fast, secure data

Chloe’s presentation is a resounding success, but the client has a few questions about its current investments. Instantly, Chloe securely accesses the client’s confidential account details from her virtual app and answers the questions without waiting to get back to the office.

Lost ... but found

At 33,000 feet, Chloe decides to get some work done, but her in-flight Wi-Fi connectivity is poor. Thankfully, she can still work via her Citrix virtual desktop, which powers productivity even in poor network conditions.

Chloe’s presentation is a resounding success, but the client has a few questions about its current investments. Instantly, Chloe securely accesses the client’s confidential account details from her virtual app and answers the questions without waiting to get back to the office.

Life balance

Landing back in Boston, Chloe is exhausted but realizes she has just enough time to make it to her son’s soccer game. At halftime, she uses the secure mobile email app via Citrix Endpoint Management (formerly XenMobile) software to answer one final question from the New York City client, attaching another bit of important financial data from the early morning Hong Kong call. Minutes later, she watches her son score the winning goal.

One in 10 laptops is lost or stolen
